

- Design an algorithm that would seat people more equitably.
- Write up a description of your algorithm and save it as `week09_seating/seating.pdf` (or `week09_seating/seating.md`). Make sure this description states how it should improve equity and also how it might affect other concerns.
- NO CODE IS NEEDED OR EXPECTED HERE -- just a description -- but make a note of implementation issues that might make your algorithm more practical or more difficult to implement
